Teammates IT No : IT16178700

Instructions

1) Open the Health care app

a) Is app icon identifiable?

No

b) Do you like the color of app icon?

No

Both app background color and app icon are white so user cannot identify icon quickly. It wants differentiate background and icon.

2) Go to Medicine

a) Is the icon reflecting the name?

Yes

b) Can you prefer the theme of home screen?

Middle Level (Yes and No)

Not working main layout search icon and settings icon. Western Doctors cannot identify the medicine icon because it looks foods.

3) Add a medicine

a) Did you able to find the add button in the interface?

Yes

b) Is the add medicine form looks attractive?

No

Hard to find quickly add button because it locates in bottom of the layout. Have not usability and clearly typing medical condition text area.

4) View medicine

a) What do you think about the color of the list?

It is not good.

b) Is the font size clear enough?

Yes

List background color and layout color are both white. So I cannot identify clearly the list of medicine records.

5) Update a medicine

a) Can you clearly identify parts that need to be updated?

No

b) Is the update button identifiable?

No

System have not given any title of given details. Later I cannot identify what are the fields I added in previous. I cannot identify update button. It looks like pensile one I click it shows add Medicine layout it must change to update medicine and button want to change to update.

6) Delete a medicine

a) Is the delete method comfortable?

No

b) What do you think about delete method?

Cannot identify.

Delete method cannot identify any user because if user want to delete medicine recode user want to give long click to medicine recode.

Summary:

App icon and loading images should be changed and the Medicine icon in the main screen also should be changed with the app theme. And also add medicine button should be changed so that the user can clearly locate the button. And also add View medicine list should be changed also that the user can see the list items clearly. Update button also should be relocated to a place where it can be identified clearly. Delete method is also uncomfortable to the user.

(To be filled by the designer)

Usability and User Experience Issues:

- User cannot identify app icon quickly because hard to differentiate icon background and icon.
- Main menu medicine icon is not reflecting the title so the user can't identify it clearly specially for a Western Doctors.
- Theme of the home screen also should be reconfigured.
- Hard to find quickly add button because it locates in bottom of the layout.
- Have not usability and clearly typing medical condition text area.
- User cannot identify clearly the list of medicine records because of the background colors and list item colors are both white.
- Update fields is not clear to the user because it doesn't have clear labels.
- Update button icon is also misleading because it's looks like a pensile to the user.
- So can't find the delete method.
- Delete method is not comfortable to the user because if user want to delete medicine recode user want to give long click to medicine recode.
