Task 2 :- User Stories

- As a doctor, I want to note additional medicine information so that I can keep track of extra note details.

- As a doctor, I want to edit the added note details so that I can modify the information including specifying the details.

- As a doctor, I want to logging to the system so that I can secure my details.

- As a doctor, I want to view all the stored notes with that added date and title so that I can quickly identify notes.

- As a doctor, I want to search through stored notes list so that can find the notes quickly.

- As a doctor, I want to view a added note so that I can get the view of a specific note.

Task 3:User Journey

User	Access Home Screen	Goes to Note page	Select add note	Add note Details

User	Access Home Screen	Goes to Note page	Search for a note page	Edit note details

User	Access Home Screen	Goes to note page	Search for a note page	View note details

Task 4 :- Wireframe 1
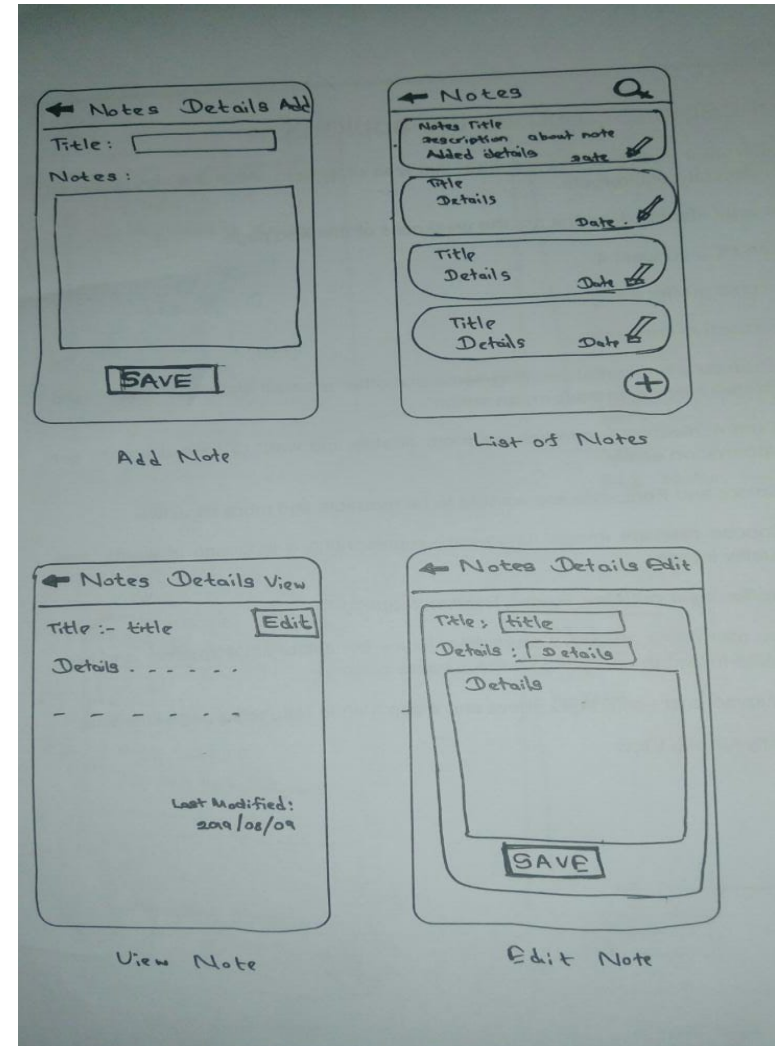

User comments

- Showing lengthy list of details if the user typed much details in notes. So, hard to identify the quickly noted which added in previously.

- Users can't find the way how to add notes in very first.

- Save, edit icons are hard to find and no validation So, user press the back-button loss every data typed in first which unsaved

- Mismatch color matching having white color background and notes list background.

Wireframe 2

User comments

- There is back button to go to previous page.

- Save, edit buttons are easy to find.

- Customer can see the note title name and modified date on the list.

- Customer can easily identify the items on the list and can search the notes.

Task 4 :- Adobe XD design

- Considering both wireframes the wireframe 2 is best for the function because of the user comfortable design and easy usability.
